Summary

In today's era, technology is your ticket to success. Whether it's an app, state-of-the-art software, entertainment, or e-commerce, embracing technology is essential to stay ahead. Businesses face the daily challenge of keeping up with rapidly evolving technology. By leveraging technology, they not only improve processes but also open up possibilities for expansion while minimizing human error.

I am Zeldene van Vüren. Technology has fascinated me since a young age—not just video games and phone chats, but the underlying mechanics. I'm constantly immersed in ideas for new software, ranging from everyday-use apps to intricate video games with captivating storylines and plot twists.

I have an insatiable appetite for learning and self-improvement. When working on projects, I invest my heart and soul to meet requirements and deliver desired results. While I often take a leadership role in group settings, I remain open to collaboration and contributions from others.

Ultimately, my goal is to develop software that not only functions seamlessly but also leaves a lasting impression on its users.

Education

High School
Hoërskool Die Wilgers, Pretoria East, South Africa
I was part of the top 10 academic awards for grade 11 and grade 12.

University
Belgium Campus ITversity, Pretoria North, South Africa
